Re: *Wireless Infrastructure Notice of Proposed Rulemaking and Notice of Inquiry, WT Docket Nos. 17-79 and 15-180*

BUCKET FILE COPY ORIGINAL

Ms. Dortch:

Thank you for the Public Notice of March 30, 2017, concerning WT Docket Nos. 17-79 and 15-180, "Accelerating Wireless Broadband Deployment by Removing Barriers to Infrastructure Investment," which proposes a comprehensive review of the Federal Communications Commission's (FCC) regulatory reviews, especially regarding the National Historic Preservation Act (NHPA) and National Environmental Policy Act (NEPA). This letter serves as comment on the Notice of Proposed Rulemaking (NPRM) and Notice of Inquiry (NOI) from the Texas State Historic Preservation Officer (SHPO), the Executive Director of the Texas Historical Commission (THC).

We share many of the same goals as the FCC when it comes to streamlining the regulatory review for telecommunications antennae, as shown by our participation in the Non-Compliant Towers Discussion Meeting in January 2016, our implementation of batched reviews for Positive Train Control (PTC) sites and Distributed Antenna Systems (DAS), and our new online project review submittal portal, eTRAC. We recognize that telecommunications technology continues to evolve and serve ever-growing demands, but in general, we believe that the existing Nationwide Programmatic Agreements and related guidance from the FCC and the Advisory Council on Historic Preservation (ACHP) have effectively balanced the needs of the industry without jeopardizing our irreplaceable heritage. Since 2016, THC has reviewed over 900 FCC projects, with an average response time of less than nine (9) days. We look forward to further consultation, and offer the following preliminary comments on the NPRM and NOI.

Section II.A.1 "Deemed Granted" Remedy for Missing Shot Clock Deadlines

- Item 9—Irrebuttable Presumption
Setting a reasonable absolute limit for a SHPO review, beyond which failure to act results in a deemed grant of approval, appears to be appropriate. However, we do want to stress that limit should apply only to a SHPO's failure to act or respond to the submission of a complete application, not to the resolution of the Section 106 consultation.
- Item 13—Lapse of State and Local Governments' Authority
Outlining a process by which FCC may revoke a state or local government's authority to review projects if it has failed to meet its review obligations appears to be appropriate only if: 1) FCC can demonstrate the locality's failure to meet obligations is a long-running pattern, not an isolated or time-limited failure, 2) the locality is given the opportunity to rebut the claims, and 3) there is a process by which the locality can re-assume its review authority.

Section II.A.2 Reasonable Period of Time to Act on Applications

- Item 16
The reasonable periods of time that the FCC proposed in 2009—90 days for collocation applications and 150 days for other applications—appear to be appropriate. THC would support a shorter period of time for

new structures of less than fifty (50) feet tall, or where structures are located within or adjacent to existing utility rights-of-way (but not transportation rights-of-way) with existing utility structures taller than the proposed telecommunications structure. THC does not support shortened review periods for *batched* DAS applications as they have thus far been frequently proposed in historic districts or for collocation on/in historic buildings.

- Item 18

As per 36 CFR Part 800, THC believes that the “shot clock” for review should not begin until the SHPO receives an “adequately documented finding,” including information on the proposed undertaking, the identification of historic properties, and the assessment of potential effects to any historic properties. THC does not impose a “pre-application” period, but we understand why some localities may do so.

Section II.A.3 Moratoria

- Item 20

THC has not implemented moratoria on the processing of wireless siting applications, and we have no knowledge of moratoria by others in Texas.

Section II.B Reexamining NHPA and NEPA Review

- Item 22

We concur that any amendments to the existing nationwide programmatic agreements cannot be undertaken without appropriate public comment, and the concurrence of the Advisory Council on Historic Preservation and the National Conference of State Historic Preservation Officers.

Section II.B.2.a Need for Action

- Item 32

Consultation with local governments, the SHPO, THPOs, the public, and other identified stakeholders is a necessary and fundamental component of the Section 106 review process. Compliance with Section 106, and its implementing regulations at 36 CFR Part 800, is an obligation of the responsible Federal agency, though the FCC, through extensive consultation leading to the Nationwide Programmatic Agreements, has in turn, delegated much of this authority to their applicants. THC believes that this already represents a massive streamlining, allowing the industry to initiate consultation, prioritize projects, and manage their overall workload in ways that would not be possible if the FCC managed each step of the review process.

- Item 36

While THC obviously cannot and does not speak for any Tribal Nations, we would like to state that sacred burial grounds are not the only types of properties that may hold religious or cultural significance and potential effects to other significant sites should not be dismissed.

- Item 37

There are no fees associated with THC’s review of Federal Undertakings subject to Section 106. There is no project review application fee, no fee for registering with our online project review submittal portal, and no fee for viewing or downloading information from our Historic Sites Atlas (a separate Archeological Sites Atlas contains confidential information and is generally limited to professional archeologists).

THC does not believe that review by the SHPO and review by the local government are duplicative, even if conducted by a Certified Local Government (CLG) issuing a Certificate of Appropriateness. Local historic preservation ordinances may not account for historic properties unless specifically designated as a local landmark or within a locally designated historic district, they may not consider indirect effects of structures within or near historic districts, or they may not consider effects to building interiors (for DAS installations).

Also, CLG staff and local commissioners may or may not meet the Secretary of the Interior's Professional Qualifications Standards and may rely on the SHPO for technical guidance. Finally, review by the SHPO and local government complement each other—where the local government has in-depth knowledge of local history, the SHPO may have a better sense of broader historic themes and contexts.

Only rarely has THC review resulted in changes to the proposed project. Most often, these changes have been a reduction in height for new towers within or near historic properties, specifying particular installation methods (i.e. using rooftop ballast sleds rather than anchoring antennae into historic masonry), or aesthetic changes (i.e. using a stealth monopole or installing screening or landscaping at the tower base).

II.B.2.b.ii Other NHPA Process Issues

- Item 56

The best guarantee of a timely review by THC is for the applicant to transmit a full and complete submittal, including an “adequately documented finding” and any additional information that may be necessary. For instance, submitting an initial application for a collocation on a historic building without including adequate information about the proposed method and/or location of installation, causes unnecessary delay.

- Item 59

We have found the batching of PTC project reviews largely successful, and utilizing a similar approach for other types of applications may be appropriate, based on the project type, consistency of equipment and installation, expected impacts, and geographic proximity. THC would recommend a geographic area of no larger than a county, but in urban areas a much smaller footprint would be more appropriate. In all cases, each batch should include an overall map showing and labeling all of the proposed locations, site maps for each location, installation and construction information, and detailed addresses or latitude and longitude.

II.B.2.b.iii NEPA Process

- Item 61

THC could support a targeted categorical exclusion for DAS sites located on/in buildings that are less than 45 years of age that are not listed in, or previously determined eligible for listing in, the National Register; and the antennae are installed to not be visible from a National Register-listed or -eligible property.

II.B.2.c.i Pole Replacements

- Item 64

THC could support broader exemptions for replacement of existing telecommunications towers, but does not support including poles that were not originally constructed for the purpose of carrying telecommunications antennae. In historic districts, light poles and even utility poles may themselves be character-defining features, and their replacement without Section 106 consultation could result in adverse effects to historic properties.

II.B.2.c.ii Rights-of-Way

- Items 65–67

THC does not support a blanket exclusion of tower construction or DAS installation in transportation rights-of-way. Perhaps an exemption could be appropriate for towers within designated Interstate highway rights-of-way where existing structures of similar size (i.e. other telecommunications towers, buildings, or billboards) are in proximity. Otherwise, the existing Nationwide Programmatic Agreements should remain in place.

II.B.2.c.iii Collocations

- Item 69

THC does not support excluding collocations located between 50 and 250 feet of a historic district from review. Depending on how the boundaries of the historic district were drawn, reducing this distance to 50 feet could mean collocations directly across the street from historic properties would be exempt from review.

- Item 71

Similar to Item 37 above, THC does not support excluding projects from SHPO review that have been reviewed by the local government, even if conducted by a Certified Local Government issuing a Certificate of Appropriateness.

II.B.3 Collocations on Twilight Towers

- Item 78

At the January 2016 Non-Compliant Towers Discussion Meeting, the FCC appeared committed to seeking a solution to the Twilight Tower issue that included both an approach to identify non-compliant towers that caused adverse effects to historic properties and providing for meaningful mitigation, both for the foreclosure of the opportunity for the ACHP, SHPO, THPOs, and other stakeholders to comment on the initial tower construction and for any specific adverse effects to historic properties. We agree that steps should be taken to resolve the Twilight Tower issue, but THC does not support a blanket post hoc clearance of such towers.

We look forward to further consultation with your office, the ACHP, NCSHPO, our local partners, and other interested stakeholders, and we hope to maintain a partnership that will foster effective historic preservation. If you have any questions concerning our comments, or if we can be of further assistance, please contact Justin Kockritz at 512-936-7403 or justin.kockritz@thc.texas.gov.

Sincerely,

Justin Kockritz, Historian, Federal Programs
